

### **Understanding Patient Preferences in Neuroendocrine Tumor (NET) Treatments**

DIRECT NETs is an international study that seeks to improve patient-centered treatment decision making. Using an innovative survey that involves making a series of choices between potential treatments with different characteristics, the study will enhance doctors' understanding of why different people prefer the various medications that are used to treat NETs.

DIRECT-NETs is an online, self-administered anonymous survey that takes less than 15 minutes to complete. It is open to:

- NET patients
- Families and friends of NET patients who have been involved in their journey
- Healthcare professionals involved in the care of NET patients

The DIRECT NETs study will launch on September 24<sup>th</sup>, 2020 and the survey will be available through November 5<sup>th</sup>, 2020.

DIRECT NETs is a study being conducted under the auspices of CommNETS, the Commonwealth Neuroendocrine Tumour Collaboration.

You can find out more about the study, and self-enroll if you are interested, at the following website:
